

12th conference Würzburg 2006

The 2006 conference was held in Würzburg, Germany and was hosted by Rainer DF6NA. Rain put on essentially one man show, but did a spectacular job of it. This conference was one of the best attended with 140 OM's and 52 XYLs (and accompanying persons) for a total turnout of 192. Besides technical talks there are always discussions on operating practices. At EME2006 there was discussion on the setting of transmitter frequency for skeds. The group was 100% behind continuing the practice of setting the TX sked frequency without any compensation for Doppler – the practice in use today. Of course in responding to a CQ, the mutual Doppler value should be used to correct the TX frequency.
